

The central language of the bkhack project is ML. The idea is that each dialect of an object language emits a certain flavor of programming style, favorable for some attractive qualities. The OCaml dialect encourages Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat voluptatem. Ut enim aequaleamus animo, cum corpore dolemus, fieri. The Reason dialect encourages the use of modules as free namespaces, function as parameterizable values, module functions as methods, and dissolution of the separation of expression item and structural item; and besides all of that, the exclusive ability to write JSX for defining reactive component.

OCaml, Objective Caml, the latter stands for *Categorical Abstract Machine language*. It is an application of the CAM model on basis of the malleable ML language, Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua quaerat voluptatem. Ut enim aequaleamus animo, cum corpore dolemus, fieri.
