

Continuation of BIPHASIC PROGRAMMING

Off-shoring, as introduced by Oleg Kiselyov [Kis24],

A naive branched sub-compiler

For example, it's possible to describe CSS stylesheet in Reason in the same code that defines React components

```
let%comptime feed__hint = {  
  open At__sh(Shellgen)  
  Css_gen.StyleSheet.format1(  
    ~className=__name__, {|  
      &.command::before { content: ? ;}  
    |}, command)  
}
```

where the `%comptime` macro denotes Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.. This can then later be used as

```
module Hint {  
  [react.component]  
  let make = () =>  
    ...  
    <span className={  
      "command "++feed__hint} />  
}
```

Behind the scene

```
external feed__hint : string =  
"src_Page__app_re__feed__hint"
```
